

Engineering Final year projects

- Count no. of peoples in the room and automate light switching system with a cloud server update.
- IOT based Air quality index monitoring system.
- Face recognition Attendance system
- IOT based solar power monitoring with cloud server data
- IOT based ECG monitoring system
- Fluid flow monitoring system through cloud.
- Under water communication using IR sensor
- RFID technology automation system
- Self directed fire fighting robot.

Basic projects

- Dual axis solar tracker system
- Colour shorting machine
- Gesture/voice control bot
- Weather monitoring system
- IOT based Home automation system
